Yazi

General

Yazi is a blazing fast terminal file manager written in Rust, based on async I/O.

Navigation

`k` or `Up` - Move the cursor up

`j` or `Down` - Move the cursor down

`l` or `Right` - Enter hovered directory

`h` or `Left` - Leave the current directory and into its parent

`K` - Seek up 5 units in the preview

`J` - Seek down 5 units in the preview

`gg` - Move cursor to the top

`G` - Move cursor to the bottom

`z` - Jump to a directory using zoxide

`Z` - Jump to a directory or reveal a file using fzf

File Operations

`o` - Open selected files

`O` - Open selected files interactively

`Enter` - Open selected files

`Shift + Enter` - Open selected files interactively (some terminals don't support it yet)

`Tab` - Show the file information

`y` - Yank selected files (copy)

`x` - Yank selected files (cut)

`p` - Paste yanked files

`P` - Paste yanked files (overwrite if the destination exists)

`Y` or `X` - Cancel the yank status

`d` - Trash selected files

`D` - Permanently delete selected files

`a` - Create a file (ends with / for directories)

`r` - Rename selected file(s)

`.` - Toggle the visibility of hidden files

`;` - Run a shell command

`:` - Run a shell command (block until finishes)

`-` - Symlink the absolute path of yanked files

`_` - Symlink the relative path of yanked files

`Ctrl + -` - Hardlink yanked files

Selection

`Space` - Toggle selection of hovered file/directory

`v` - Enter visual mode (selection mode)

`V` - Enter visual mode (unset mode)

`Ctrl + a` - Select all files

`Ctrl + r` - Inverse selection of all files

`Esc` - Cancel selection

Copy Paths

`cc` - Copy the file path

`cd` - Copy the directory path

`cf` - Copy the filename

`cn` - Copy the filename without extension

Filter Files

`f` - Filter files

Find Files

`/` - Find next file

`?` - Find previous file

`n` - Go to the next found

`N` - Go to the previous found

Search Files

`s` - Search files by name using fd

`S` - Search files by content using ripgrep

`Ctrl + s` - Cancel the ongoing search

Sorting

`,m` - Sort by modified time

`,M` - Sort by modified time (reverse)

`,b` - Sort by birth time

`,B` - Sort by birth time (reverse)

`,e` - Sort by file extension

`,E` - Sort by file extension (reverse)

`,a` - Sort alphabetically

`,A` - Sort alphabetically (reverse)

`,n` - Sort naturally

`,N` - Sort naturally (reverse)

`,s` - Sort by size

`,S` - Sort by size (reverse)

`,r` - Sort randomly

Multi-Tab

`t` - Create a new tab with CWD

`0 or ... or 9` - Switch to the n-th tab

`[` - Switch to the previous tab

`]` - Switch to the next tab

`{` - Swap current tab with previous tab

`}` - Swap current tab with next tab

`Ctrl + c` - Close the current tab

Configuration

There are three configuration files for Yazi:

- `yazi.toml` - General configuration.
- `keymap.toml` - Keybindings configuration.
- `theme.toml` - Color scheme configuration.

The location for these configuration files is:

- `~/.config/yazi/` on Unix-like systems.
- `%AppData%\yazi\config\` on Windows.
